

President's Message

Rick Lackey, President TRNA

As one drives around the neighborhood, one can't help but realize why the West Side is the fastest growing part of the City. The new construction planned within the next few months that I know about includes a Dion's, a Texaco Food Mart and a Phillips 66 station at Coors and Montaño. The new McDonald's opened at Golf Course and Paseo Del Norte, and we now have a Dairy Queen in Montaño Plaza. With two six year olds, I've been to both.

As I write this, July 4th is around the corner; summer is slipping by. I hope everyone has paused long enough to enjoy the long days and great evenings.

The second annual **National Night Out** is Tuesday, August 5th. Call 924-3600 if you would like any additional information. There are several nice prizes for the block celebrations.

My family has enjoyed riding on the new Montaño bridge, but it will be even nicer to drive across it this fall. (No, I would not want it closed to traffic on Sunday.) There is an event tentatively scheduled in August to celebrate the opening.

With the arrest last week of some burglars hitting the Taylor Ranch area, I hope the crime spree has been resolved. I, however, encourage you to keep up the Neighborhood Watch program and report any strange happenings.

Until next month, God bless your family! ☺

Youth Committee Events

Amanda Tatum, Member TRNA

You may have forgotten about the youth committee, but we're still out there. Our committee has now become active again. In February, we had a **Valentine Dance**. The dance had a low turnout, but everyone had a great time. The low turnout was due to lack of advertisement. At the **Easter Party**, our entire committee helped run the games and helped set up this major Taylor Ranch event. In April, a few of our members helped pick up trash around Marie Hughes at the annual **Bag-a-Thon** event. We also had help from some of the students from Marie Hughes. We got a lot done.

We recently had a **Moonlight Dance** at Santa Fe Village Park. Again, due to lack of advertisement, we had a low turn out but

we had a great time playing volleyball with the Albuquerque police officer that was there helping with security and everybody who showed up. I and the rest of the committee would like to thank the chaperones that helped at the dance.

Fab Fridays

On July 18th, there will be a fun day at LBJ for teens to attend. Starting at 9 a.m., activities planned are sports, a rock climbing wall, skate boarding exhibition, and much more. The **City Parks and Recreation Department** recruited our committee to help plan this fun day. There will also be a swim party that evening starting at 6 p.m. at Sierra Vista pool.

If you or anyone you know wants to join the TRNA youth committee, call Monica at 899-8501, or join at the swim party and ask any questions. There will be food for sale at both events. This **Fab Fridays**, as we call it, is sponsored by **Norwest Bank**. THANK YOU. ☺

Important Dates:

18 Jul	9 am	Fun Day at LBJ - City Parks & Rec Dept. and TRNA Youth Committee - see Youth Committee article
18 Jul	6 pm	TRNA Youth Committee Swim Party @ Sierra Vista Pool
19 Jul	6-11 pm	Summerfest @ Central, African, Native American, 768-3483
26 Jul	6-11 pm	Summerfest @ Central, Greek, Irish, Scottish, Welsh, 768-3483
2 Aug	6-11 pm	Summerfest @ Central, Arabic, Hispanic, 768-3483
3 Aug	12-7 pm	Renaissance Faire @ Roosevelt Park
6-10 Aug	---	NM Senior Olympic Games, mostly at UNM, for info call 291-6277
26 Aug	7-8:30 pm	Neighborhood Association Beat Mtg, location TBD, meet APD officers, see article

Editor's Note

Michael Skroch,
Editor Mesa
Messenger

The newsletter needs your help! One of our long-time volunteers won't be able to help with newsletter production much after this issue.

We need your help to bring the newsletter to be copied, for folding, stapling putting on labels, and brining it to the post office. You won't be alone and that work isn't too hard. Please give me a call!

Thanks to Don Newton for helping to update the phone list with new numbers. I hadn't put in the effort, so his effort helped a lot.

You can also help if you send in articles like those you've seen in past and this

issue of *Mesa Messenger*. Announce and report on events and activities in Taylor Ranch and those of interest to your community.

Eye on Education

Rexanna Jones, TRNA director

Be sure to watch the school marquees for information on finalizing registration. Most schools have scheduled August 14th or 15th as the registration day. If you are new to Taylor Ranch or have a new neighbor, let them know that LBJ will register new students July 15th (bring shot records and birth certificates) from noon to five. Cibola is registering each morning from 8 a.m. to noon for new students. ☎

New Mexico Senior Olympics

Genny Michael, President Albuquerque Senior Olympic Advisory Council

The State of New Mexico Senior Olympic Games for ages 50-plus will be held in Albuquerque on August 6th through August 10th. Most of the venues for the 24 different sports will be at UNM. All participants have qualified at local competitions and have registered by May 23, 1997. For more information, call 291-6277. Spectators are welcome. Volunteers are needed (phone 761-4283). ☎

Neighborhood Assoc. Beat Mtg.

David DeMoss, Director TRNA

Here's your chance to meet APD officers from the West Side Area Command, which cover our area of the City. Stop by on August 26th from 7:00-8:30 p.m., listen and ask questions. This meeting is sponsored by APD, Las Terrazas, Santa Fe Village, and TRNA, the west side Area Command. Location TBD, call David DeMoss at 899-0735 for the location. ☎

Jean Wozniak Ad

Mesa Messenger is published just about monthly by the Taylor Ranch Neighborhood Association, Inc. (TRNA) and is distributed to paid TRNA members. Membership information may be found on the last page of this newsletter. **Deadline for articles** and advertisement is the fourth Friday of each month prior to the month of publication; however, it is appreciated if they are turned in earlier. *Mesa Messenger* is distributed by the 15th in the month of publication, usually earlier.

Articles should be submitted to the editor, Michael Skroch, 899-4471 voice & fax, may be mailed to the TRNA post office box. Articles are accepted typed on paper or faxed to the above number; however, they are preferred on a DOS disk as a text, Word, or WP file. Macintosh Word or text files on 1.44 Mb disks are also accepted. You may also email your articles to ambidex@swcp.com.

Call the editor about graphic file formats or images to be scanned.

Non-business text-only classified ads such as for-sale, wanted, garage sale, etc. are offered to our paid members at \$5 for up to 50 words, \$0.10 per word extra, tax included. For timely insertion, call the editor. Please advertise early.

Business advertisement is accepted from any business members or resident members who own or operate a business within the borders of TRNA. Business ad rates, payable in advance, are \$10/mo. business card, \$25/mo. 1/4 page, \$50/mo. 1/2 page, \$33/mo. 1/3 page and \$100/mo. full page plus tax. There is a minimum run of three months and there is a 30 percent discount for runs of 6 months or more. *Mesa Messenger* editor and TRNA board reserve the right to refuse any ad or article.

Ad copy in the following sizes only: Full page at 7.5" wide x 9.5" long. Half page at 7.5"x4.75" (3 col.) or 5"x7" (2 col.). Third page at 7.5"x3.2" (3 col.) or 5"x4.75" (2 col.) or 2.5"x9.5" (1 col.). Quarter page at 7.5"x2.5" (3 col.) or 5"x3.5" (2 col.) or 2.5"x7.5" (1 col.). Business card at 3.5"x2".

The editor can help design or lay out your ad and can take camera-ready copy. To place a business ad, please call Michael Skroch.

Many thanks to our newsletter advertisement, production and distribution staff:

A Cooler Swamp Cooler

Michael Skroch, Editor TRNA

In New Mexico, most of us use swamp coolers to keep cool in the summer. Often it seems that it's not cool enough. I attempted to squeeze a few more degrees of comfort from my swamp coolers this summer with the following inexpensive project. Take a look to see if it might help you.

A problem with almost all swamp coolers is that they have a large top area that is exposed directly in the sun. This top outside gets very hot which also means that you have a hot surface inside your swamp cooler. That doesn't help keep things cool! One might keep the swamp cooler shaded; however, that is not always easy to do. Trees take a long time to grow, the cooler may be on top of the house away from shade, and temporary measures may look funny draped over you cooler or on your roof. So, if you have one or more swamp coolers that sit out in the sun for some part or all of the day, you may wish to try this project.

The solution presented in this article is to bring the shade down to the cooler by placing a thin metal sheet over the cooler with an air gap so that the cooler top itself is in the shade. This project could use a sheet of material other than metal; however, think about it. Wood and plastic tend to be damaged by the sun and plastics may be hard to work with. If you use a hard plastic, it may tend to shatter when drilled (I tried it once).

Here's how I did this for my swamp coolers. Both of mine sit in easy-to-reach flat areas; if yours is on a pitched roof or surrounded by tile, consider getting a professional to do this. Read and modify this to match your cooler design and type. I have a standard metal, rectangular, side-draft type with three removable panels. The top is just over 36 inches square. This procedure will work with down-draft types with no modification. If you have a round cooler, you will need to modify this quite a bit on material dimensions, but the same process should apply. If your cooler is not made of metal (such as fiberglass), be careful how you drill holes and

how the screws connect to the cooler.

My costs to do this for each swamp cooler were very small and they will be for you if you already have the required tools. I didn't have to cut my sheet of aluminum since it came the correct size. I would suggest obtaining odd-sized or shaped pieces of aluminum or other metal from a metal shop in town. It will look much more professional when installed on your home.

My materials list:

- 1" PVC Piping ~\$2
- Aluminum Sheet (36"x36") ~\$16
about 0.02" thick
- Assorted sheet metal screws < \$2
- (9) 2" #8 hex head
- (~12) 1/2" #8 hex head
- Total materials: ~\$20*

My tool list:

- PVC pipe cutter or hand saw
- Drill and various bits
- Screwdriver, 1/4-inch hex socket
- Pliers (to bend metal sheet)
- Magic marker

I chose a square sheet of aluminum about 0.02" thick and would suggest you use that or galvanized steel. This is a sheet of the thickness you can shake to make thunder-like noise. Thicker sheets will tend to rattle less in the wind, are harder to find, and are harder to cut and bend, and are more expensive. You might try a 1/16-inch (0.0625") aluminum sheet which is a common thicker size, if you can find it and want to spend the money. Sheets thinner than about 0.02" will require more PVC support pipes since the metal will sag more. It will be damaged more easily should it be hit or should something set on it. I found the metal sheet I used was available at both Home Base and Home Depot.

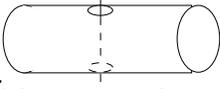

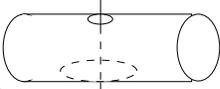

I haven't had any galvanic corrosion problems, but haven't had it installed long enough to really know. If you're worried about that, consider fiber or nylon screws to attach the sheet to the swamp cooler. Adjust hole sizes as necessary. I wasn't worried enough to do this.

Here is a step-by-step suggested procedure.

1. Read this whole article before you begin. Before you start working, turn off electricity to your swamp cooler. Make sure the power is off and will not be turned on by someone else.
2. Obtain materials for this project that will fit your swamp cooler. If the metal sheet is not the right size, cut it to size. If you need more or less PVC pipe, obtain the correct amount.
3. Survey the inside of the swamp cooler to make sure that sheet metal screws that will penetrate the top will not go into anything critical (such as piping or electrical wiring). If there is a

problem, adjust the procedure as needed.

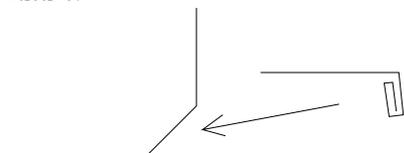

4. Cut three pieces of PVC pipe to desired length. In my case each was cut to 36 inches which required one 10-foot 1-inch diameter pipe. I suggest the ratcheting knife-pliers PVC cutters for doing this, otherwise use a saw.
5. Drill three 1/4-inch holes in the pipe all the way through the pipe; two of them at two inches from each end of the pipe and one in the center. Make sure that the holes are perpendicular to the pipe and that they are all in a straight line. This hole should allow the screw shaft to pass but not allow the head of the screw to penetrate the hole. 
6. On one side of the pipe, widen the three holes 3/8-inch or 1/2-inch. Do not drill all the way through! Drill only one side of each hole this way. These wider holes will later face down toward the swamp cooler and are intended to make it easier for screws to line up with holes during assembly. 
7. Place the metal sheet directly on top of your swamp cooler by itself. Position it so that it is set in the same orientation as you wish it to be when completed.
8. Place the 1st pipe on top of the metal sheet about three inches from the edge of the swamp cooler. Hold it in place.
9. Drill three 3/32-inch holes through the metal sheet and swamp cooler top. Do this by placing the drill in the center of each of the three holes in the pipe. Don't move the pipe between each drilling! Mark the pipe's right end with a marker and a "#1." Remove the pipe when done.
10. Place two sheet metal screws in the two end holes. Screw them in just a bit (not all the way) in order to hold the metal sheet in place for the rest of the hole drilling.
11. Place the 2nd pipe on top of the metal sheet near the center line of the swamp cooler and drill three 3/32-inch holes as done for the 1st pipe. Mark the pipe's right end with a marker and a "#2." Remove the pipe.

12. Repeat for the 3rd pipe which should be located about three inches from the other end of the swamp cooler. Mark the pipe's right end with a marker and a "#3." Remove the pipe.
13. Remove the two screws that were holding the metal sheet in place. Keep the sheet on top of the swamp cooler.
14. Place a block of wood in turn under each hole in the metal sheet and widen by drilling the hole with a 5/32-inch drill. Do this for all nine holes. Remove the block of wood and reposition the metal sheet on the swamp cooler.
15. Put the 1st pipe between the swamp cooler and metal sheet align the right side as marked. The larger holes go down toward the swamp cooler. Insert three 2-inch #8 sheet metal screws, one in each hole. The screw first goes through the metal sheet, then the PVC pipe and then into the swamp cooler. First insert each screw into the swamp cooler but do not tighten. When all three are in place, tighten all screws. Do not over-tighten or you will strip the screw or the hole in the swamp cooler.
16. Repeat the above for the 2nd and 3rd pipes. Make sure to put the pipes back in the same place in which you drilled (and hopefully marked) them to make installation easier for yourself.
17. If you're using a square or rectangular sheet of metal, use a pliers bend over the corners of the sheet several times to eliminate the sharp point. Bend over about 1/4-inch of material and wrap several times. Bend this area down at 90 degrees to the metal sheet to create a blunt edge.
18. (Optionally - to tighten sheet in case it rattles less in winds. You can do this later if needed.) I did this to secure the aluminum sheet better and prevent rattling of the sheet in the wind. Using a 3/32-inch drill, drill two to four more evenly spaced holes into the material along each pipe between existing screws (see graphic next page). Drill only through the material and first side of the PVC piping (not into the other side of the PVC pipe). In each hole insert a 1/2-inch long #8 sheet metal screw and tighten. If you use a 1/16th or thicker sheet of metal, you probably don't have to do this.

19. (Optionally - to make things safer inside the swamp cooler for when you service it later.)

Purchase at least nine small plastic-only wire nuts (from the electrical section of the store). The sizes I've used are orange and yellow. From inside the swamp cooler, screw on (by hand) a wire nut on the end of each of the nine 2-inch sheet metal screws that penetrated the swamp cooler. This will prevent you from getting jabbed should you work near the inside top of your cooler in the future.

Good luck. It worked well for me. The top of the cooler is now cold in the sun even without a breeze to keep moving out air under the metal sheet.

By the way, reading this article means you agree to this legally confusing statement. If you do not agree with this statement, you should not attempt the project mentioned in this article, instead, forget you read it.
